

Top discussion points

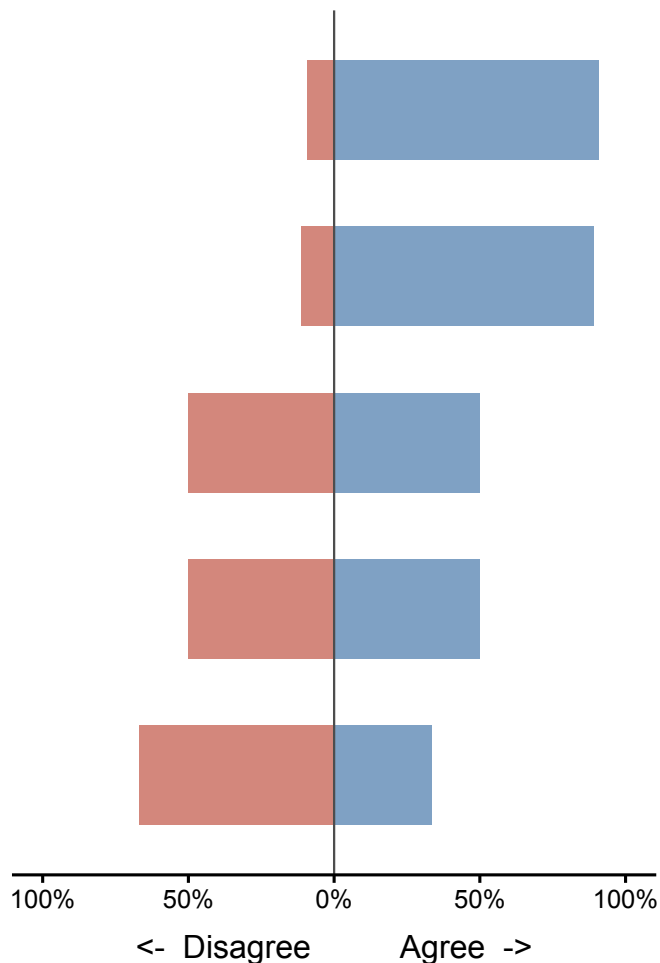

Everybody has access to the same AI capabilities. Competitiveness comes down to asking better questions and pipelines for channeling those capabilities.

An LLM is a legitimate second coder in qualitative research and should count toward intercoder reliability.

We should treat fully autonomous AI scientists making Nobel-worthy discoveries by 2050 as a serious goal worth funding.

AI can engage in more flexible forms of thinking than typical humans.

The institution of science would be better with more AI agents and fewer human agents.
